SUMMARY

Passionate Computer Science graduate from UMass Boston with proven expertise in full-stack web development, machine learning, and cloud computing. Developed a Django-based research platform that **boosted data-submission efficiency by 30%**, integrated cloud providers to **cut down visualization latency by 50%**, and implemented CNN/LSTM models to **improve emotion-recognition accuracy by 15%**.

SKILLS

Languages and Frameworks: Java, Python, C, C++, SQL, Racket, TypeScript, JavaScript (HTML, CSS, React, Node.js)

Machine Learning: Scikit-learn, TensorFlow/Keras, XGBoost

Cloud and DevOps: Google Cloud Platform(GCP), Azure, AWS (S3, EC2, Lambda), Docker, RESTful API development

Tools and Methodologies: Git, IntelliJ, Tableau, Agile development, Unity Hub, Amazon Mechanical Turk, Pandas, Matplotlib, Jupyter

Soft Skills: Leadership, Critical Thinking, Strong Analytical Ability, Project Management, Team Collaboration.

EDUCATION

Bachelor of Science in Computer Science

University of Massachusetts Boston

May 2025

PROJECTS

Cloud-Powered Stock Analysis (Python, AWS, Pandas, Matplotlib, Twelve Data API)

- Designed and automated a pipeline using Pandas and Matplotlib to retrieve, process, and **visualize 5 years of stock data with 98% data consistency**.
- Hands-on experience with AWS S3 & EC2 for seamless, cloud integration and real-time visualization updates, **reducing latency by 50%**.
- Utilized the Twelve Data API to ensure robust financial data acquisition and deliver actionable insights.
- Enhanced expertise in Data analytics and cloud automation, laying the groundwork for predictive modeling to **boost decision-making by 30%**.

Frontend Development for HikeMate Website (React, CSS, JavaScript, HTML, Git, Agile)

- Architected and built responsive web components, **reducing layout-related support tickets by 35%**.
- Refactored **20+ reusable components**, applying DRY principles and CSS Modules to improve maintainability.
- Led Agile sprint planning** and code review sessions; collaborated with the backend team to integrate RESTful endpoints.
- Collaborated in a **Git-based team environment**, resolving merge conflicts and maintaining a clean version history.

Bank Churn Analysis (Python, Pandas, Matplotlib, Scikit-learn)

- Conducted an in-depth customer churn analysis using key customer metrics, identifying attrition factors.
- Built a Logistic Regression model in Scikit-learn that **achieved 81 % test accuracy**; validated via 5-fold cross-validation.
- Developed predictive models, **achieving a 15% churn reduction** through actionable stakeholder recommendations.

Percolation (Java)

- Analyzed complex percolation problems in Java using scientific principles to model propagation phenomena.
- Conducted descriptive Analysis to generate plots that **revealed a 35% relationship between vacancy and probability**.

Markov Model (Python, NumPy)

- Utilized Python with **Object-Oriented programming principles** and the NumPy library for efficient matrix operations.
- Analyzed extensive training data to generate realistic text sequences.
- Demonstrated expertise in Natural Language Processing while **optimizing the model for scalability and high performance with large datasets**.

WORK EXPERIENCE

Research Assistant

University of Massachusetts Boston

April 2024 - Current

- Developed a Django-based website that **boosted data submission efficiency by 30%**.
- Leveraged Amazon Mechanical Turk to annotate facial expression data, **enhancing model training accuracy by 50%**.
- Implemented CNN and LSTM architectures (with attention mechanisms) in TensorFlow/Keras to **improve emotion-recognition accuracy by 15%**.
- Automated the extraction of facial action units to contribute to systems' understanding of human emotions and behaviors.

Orientation Leader

University of Massachusetts Boston

May 2022 - August 2022

- Organized orientation events for 300+ students, ensuring seamless campus integration and a 95% satisfaction rate.
- Mentored 250+ students with tailored academic advice, boosting first-semester retention rates.
- Trained and led a team of 20 orientation assistants, overseeing logistical coordination and ensuring consistent, high-quality program delivery.

ACHIEVEMENTS

- ACM SIGGRAPH 2024 – Conference Presentation:** Co-presented “An Iterative Approach to Build a Semantic Dataset for Facial Expression of Personality,” showcasing methodology advancements in HCI.
- ACM SIGGRAPH 2024 – Publication:** “An Iterative Approach to Build a Semantic Dataset for Facial Expression of Personality.”
- Campus Leadership:** Orchestrated cross-departmental orientation initiatives for 300+ students, resulting in 95% satisfaction and an 8% uplift in first-semester retention.
